

# Workshop at European Robotics Forum 2013

## The Clearing House effect on Robotics: ECHORD from the point of view of robot manufacturers and suppliers

Lyon, France  
19 March 2013  
(8h30 - 10h30)

European Clearing House  
for Open Robotics Development  
[www.echord.info](http://www.echord.info)

# **KOMPEYE - Enhancing the visual perception capabilities of Kompaï robot using parallel processing**

Andoni Beristain – Vicomtech-IK4

# INTRODUCTION

European Clearing House  
for Open Robotics Development  
[www.echord.info](http://www.echord.info)

# Partners and Roles

- ROBOSOFT (Coordinator)
  - Role:
    - Kompai robot, including services (e.g. navigation, emergency call).
    - Robot adaptation for computer vision system (camera and PC).
    - Experiment validation, including appropriate environment setup.
  - Person in charge: Arnaud Lago
- Vicomtech-IK4
  - Role:
    - Develop computer vision modules
    - Integration into Kompai platform
  - Person in charge: Luis Unzueta

# Adapted Kompai robot

Kompai  
platform  
tablet-PC

Panic  
button

Sensing

Microsoft  
Kinect®

Computer  
Vision  
Module PC

Kompai robot platform

Computer Vision Modules

Facial and Body language Analysis

Identify if the person is in trouble and notify his carer

# COMPUTER VISION MODULES

European Clearing House  
for Open Robotics Development  
[www.echord.info](http://www.echord.info)

## Depth Camera (Primesense)

- Asus Xtion
- Microsoft Kinect
- ...

## Open Source libraries

- OpenNI-NITE
- Kinect SDK

## Behaviour analysis

- Person, face,  
body detection &  
tracking

## Depth Camera (Primesense)

- Asus Xtion
- Microsoft Kinect
- ...

## Behaviour analysis

- Person, face, body detection & tracking

## Depth Camera (Primesense)

- Asus Xtion
- Microsoft Kinect
- ...

## Behaviour analysis

- Person, face,  
body detection &  
tracking

Person detection  
is not robust!!

Limited facial  
expressiveness!!

Body detection  
required for face  
detection!!

High computational  
and power  
requirements!!

# Computer Vision Modules

- **Person detection**
  - Cascade classifier based detection
  - Rao-Blackwellized Data Association Particle Filter (RBDAPF) based tracking
- **Body detection, tracking and expression analysis**
  - OpenNI-NITE
- **Face detection, tracking and facial expression analysis**
  - Cascade classifier based detection
  - Online Appearance Models (OAM) based tracking

# Demonstration of Vision Techniques video

Deliverable D2.1

Video: [KOMPEYE Experiment: Demonstration of Vision Techniques](#)

# BODY EXPRESSION ANALYSIS

European Clearing House  
for Open Robotics Development  
[www.echord.info](http://www.echord.info)

# Body Expression Analysis

- Using a new full body expression coding system (including face and body)
- Two coding approaches, inspired by:
  - Body Action and Posture coding system (BAP)
  - Synergology
- None of them provide quantitative measure, therefore adaptation has been required
- BAP is not general enough, but technically feasible
- Synergology is too complex, but it can be partially implemented.

# IDENTIFY IF THE PERSON IS IN TROUBLE

European Clearing House  
for Open Robotics Development  
[www.echord.info](http://www.echord.info)

# Identify if the Person in Trouble

- Two complementary approaches to identify if the person is in trouble:
  - **Active:** The user performs a gesture to ask the robot for help
    - Wave hand over shoulder (universal gesture to ask for attention)
  - **Passive:** The robot analyzes the person's facial expressions and/or body posture and gestures to automatically identify whether the person is in trouble or not
    - Based on BAP and Synergology

# Behaviour recognition techniques video

Deliverable D2.2

Video: [KOMPEYE Experiment: Demonstration of behaviour recognition techniques](#)

# Thank you for your attention
