

ECHORD: possible scenarios and experiments

Telerobot OCEM is a society that develops novel high-tech products and produces prototypes and small series of them;

Since early '90 Telerobot designs complex systems, in particular in the field of Robotics, Automation, TLCs, Biomedical Sciences. From a more general point of view, Telerobot is a main actor in all the fields that require deep expertise in integrating mechanics, electronics and computer sciences.

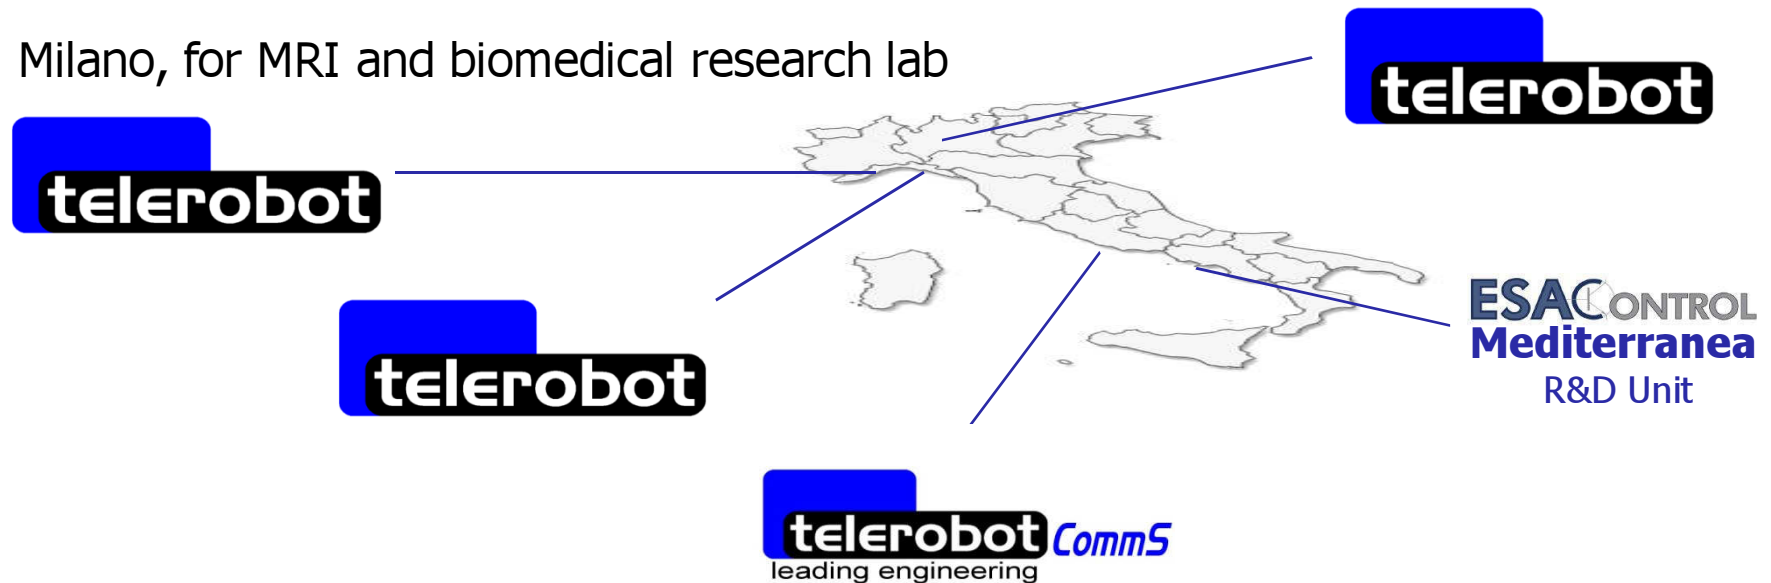

Telerobot Ocem has four sites:

Genova, for engineering services for automation, robotics and production of complex and small mechatronic systems;

Latina, for HW/Chip/RF/optical IFs/SW/FW design;

Savona, for manufacturing and production of medium and big sized systems.

Milano, for MRI and biomedical research lab

What we offer:

- ***A "solution oriented" and "Client Centered" approach***
- ***Highly qualified human, technical and management competences***
- ***A reliable and well-known expertise in developing and engineering products***
- ***A multi-disciplinary approach and a huge engineering background***
- ***Experience in facing problems in complex and not standard scenarios***
- ***A high quality network of collaborators***

What we are searching for:

- ***Companies that require technical support in the development and innovation of products***
- ***Companies that are searching for an european partner in Italy for developing novel businesses together***
- ***R&D Project teams – both from Academy and Industry- who are interested in TLR as technical partner***

Our achievements:

- **Teleoperated robots in harsh environments**
 - **Advanced vision systems**
 - **OFF-SHORE Systems**
 - **Humanoid Robotics**
- **Advanced biomedical devices**
- **Industrial Automation**

telerobot

Teleoperated robots in harsh environments

telerobot

Advanced vision systems

medusa turret MK4 for SELEX S.I. (former AMS)

telerobot

OFF-SHORE Systems

telerobot

OFF-SHORE systems for SAIPEM/ENI

telerobot

iCub: the european robotic child

Automated WorkCells ELSAG DATAMAT, antennas EHF/WBDL for SELEX COMMS

Our products:

- TLR Head EUROHE4D: 4 DoF Head for Stereo Vision

- iCub head: 6 DoF Humanoid Head for Stereo Vision

- TLR LightArm TLA_850: 7 DoF LightWeight Arm

- TLR Hand TLH_6: 6 DoF intrinsic actuated and fully integrated compliant hand **SOON AVAILABLE!!**

- TLR Stroll TLV_100: Mobile Platform **SOON AVAILABLE!!**

***Our proposal in the
ECHORD framework:***

Scenarios

1. Human-Robot Co-Worker
2. Hyper-Flexible Cells Scenario
3. Cognitive Factory

Research Foci

1. Human-Robot Interfacing and Safety
2. Robot Hands and Complex Manipulation
3. Mobile Manipulators and Cooperation
4. Networked Robots

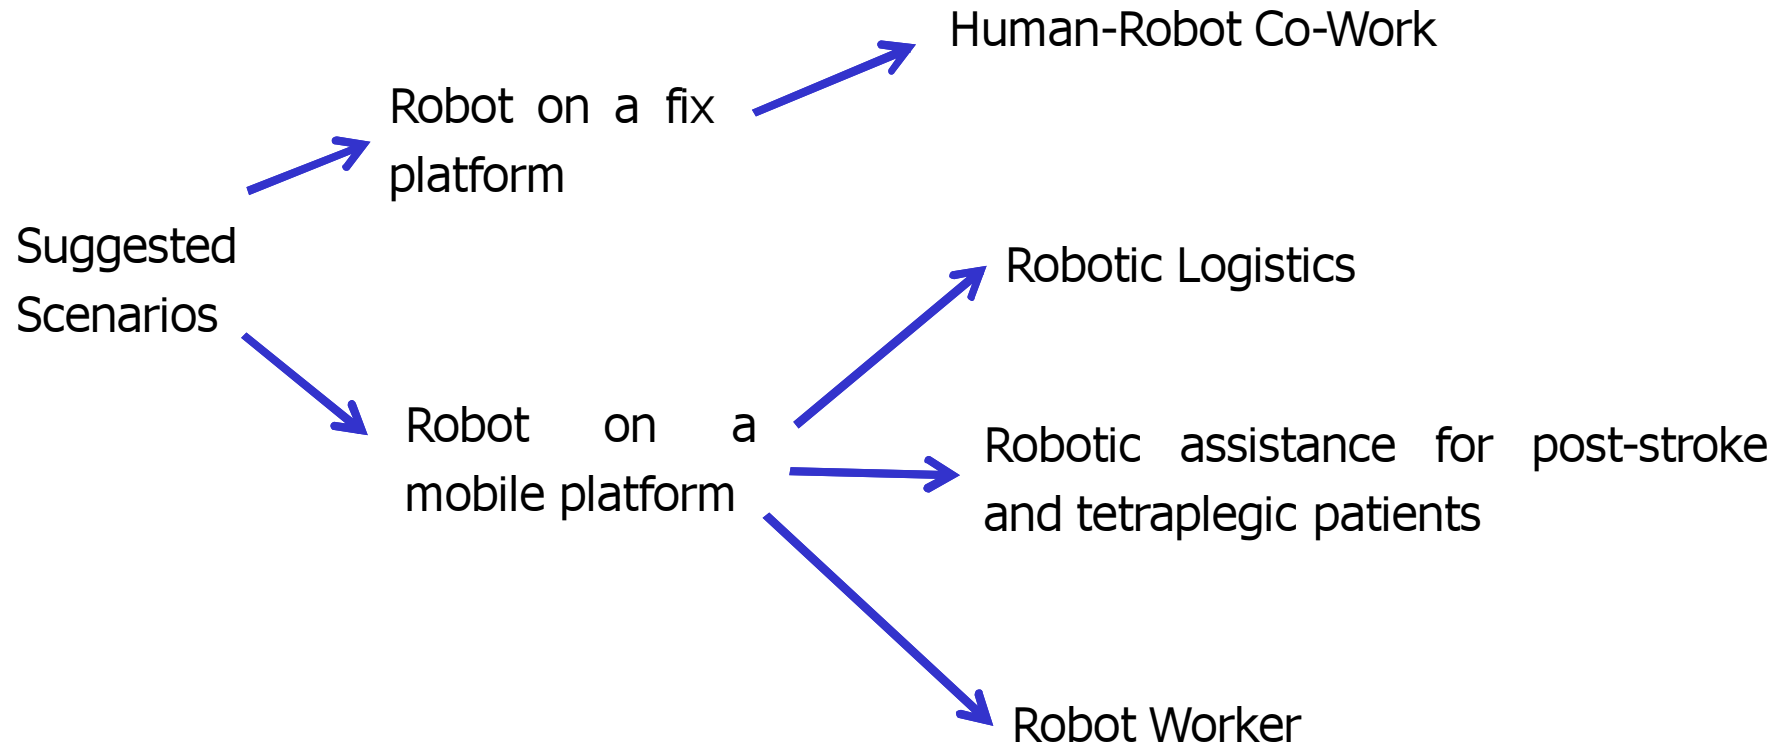

Scenarios

1. Human-Robot Co-Worker
2. Hyper-Flexible Cells Scenario
3. Cognitive Factory

Research Foci

1. Human-Robot Interfacing and Safety
2. Robot Hands and Complex Manipulation
3. Mobile Manipulators and Cooperation
4. Networked Robots

Human-Robot Co-Work

Research Issues

1. Intrinsic safety
2. Dependability
3. Learning through demonstration
4. Features recognition
5. High-level Control interaction

Robotic Logistics

Research Issues

1. Real-time 3D Mapping
2. Navigation
3. Object/feature recognition
4. Environment interaction
5. Obstacle avoidance

Robotic assistance for post-stroke and tetraplegic patients

1. Intrinsic safety
2. Dependability
3. AI algorithms for User's target identification
4. Features recognition
5. High-level Control interaction

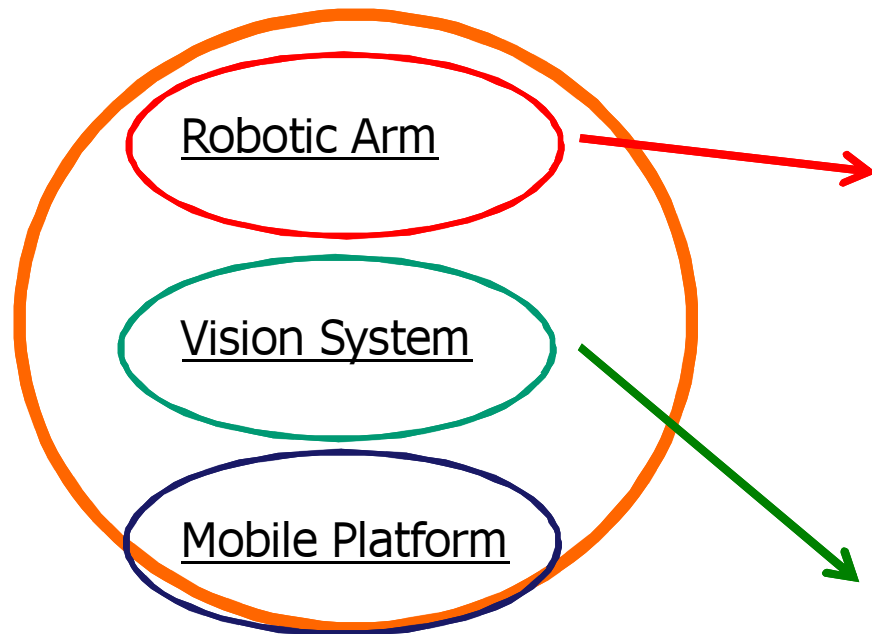

Robot Worker

1. Intrinsic safety
2. Dependability
3. Learning through demonstration
4. High-level Control interaction
5. Real-time Mapping
6. Navigation
7. Object/feature recognition
8. Environment interaction
9. Obstacle avoidance

- Reliable
- Adaptable to system inertia changes
- Adaptable to environment changes

- Flexible
- Lightweight
- Intrinsically safe
- Reliable
- Stereo
- Stable
- Adaptable to environment changes

- TLR Head EUROHE4d: 4 DoF Head for Stereo Vision

- iCub head: 6 DoF Humanoid Head for Stereo Vision

- TLR LightArm TLA_850: 7 DoF LightWeight Arm

- TLR Hand TLH_6: 6 DoF intrinsic actuated and fully integrated compliant hand **SOON AVAILABLE!!**

- TLR Stroll TLV_100: Mobile Platform **SOON AVAILABLE!!**

TLR LIGHTARM TLA_850

- Anthropomorphous Modular Arm
 - Structure: Anodized Aluminum
 - Controlled axes: 7
- Max distance Basement-End Effector: 850 mm
 - Repeatability +/- 0.5 mm
 - Approximate mass < 15 Kg
- Maximum speed: 90 deg/sec for each joint
 - Standard Protection IP30
 - Payload > 7.5 Kg
- Motor Controller: DSP on board at each modular joint; CAN bus connection.
- Communications: maximum baud rate 1 Mbit/sec, version DS 301 V4.01; layer setting service and protocol support DS 305; device profile (drive and motion control) DS 402
 - Each joint controlled in position, velocity and torque
- Modular design compatible with a gripper and a 6 DoF load cell (both items available on demand).
- Designed to work also on mobile platforms
 - Required voltage: 24 V DC

TLR HEAD TLHE_4

- 4 DoF: Tilt, Vergency (Independent, 2 DoF) and Neck Pan
 - Structure: Anodized Aluminum
 - Weight: 2.5 Kg
 - Controlled axes: 4
 - Harmonic Drives Gearboxes
 - DC Motors
 - Good dynamics
 - Required voltage: 24 V DC
- Motor Controller: DSP on board; CAN bus connection
- Designed to work also on mobile platforms

...Thank you for your attention
